# Bridging Boundaries: the role of sharing in spectrum policy

*Global Perspectives on Spectrum Sharing -  
Invitation to WInnForum International Spectrum*

# Department for Science, Innovation and Technology

Department for  
Science, Innovation  
& Technology

DSIT was established in 2023, to centralize the UK's efforts in science, technology, and innovation, with the aim of driving economic growth, addressing global challenges, and ensuring the UK's competitive edge in emerging fields.

Our objectives include:

- Accelerate innovation, investment and productivity through world-class science,
- Ensure that new and existing technologies are safely developed and deployed across the UK and
- Drive forward a modern digital government for the benefit of its citizens underpinning the Government missions.

# DSIT Ministers

Department for  
Science, Innovation  
& Technology

Peter Kyle  
*Secretary of State*

Lord Vallance of Balham  
*Minister of State*

Chris Bryant  
*Minister of State*

Baroness Jones of  
Whitchurch  
*Parliamentary under SoS*

Feryal Clark  
*Parliamentary under SoS*

# DSIT is the lead UK government department for spectrum policy

Department for  
Science, Innovation  
& Technology

DSIT

Keeping the legal framework for spectrum management under review

Digital  
Infrastructure

Setting strategic direction for Ofcom to consider in its spectrum management functions, including in international spectrum negotiations

WISC

Leading cross-government policy on public sector spectrum use

Spectrum  
team

# Spectrum sharing plays a key role to our strategy

Department for  
Science, Innovation  
& Technology

In our **Wireless Infrastructure Strategy** we set out that, as demand continues to grow, we must ensure continuous evolution of our spectrum access mechanisms and improvements in sharing.

We recognized that the introduction of Ofcom's spectrum sharing framework in 2019 was a welcome and groundbreaking step in catalysing the UK's sharing landscape.

In our **Spectrum Statement** we noted that Spectrum management should itself take advantage of innovation, as well as supporting innovation in the services which use spectrum. We also set clear ambitions to further enhance spectrum sharing arrangements in the UK, for both civil and public sector spectrum use

# Sharing And Innovation Examples

Department for  
Science, Innovation  
& Technology

**Ofcom's Shared Access Framework** marked the UK out as a world leader in making such 5G spectrum available for industrial and other applications

We asked Ofcom to explore options to increase access to spectrum (including a wider range of users) and accelerate the automation of Shared Access Licence (SAL) band licensing – which is underway

# Sharing And Innovation Examples

In the 2023 Autumn Statement, the Government committed £5 million to support **Spectrum Sandboxes**, designed to explore how technologies can improve spectrum sharing:

- Enhance spectrum sharing under the Shared Access and Local Access Frameworks, opening up access for a broader range of users, industries, and sectors.
- Enable a greater level of new services and applications from both mobile and licence-exempt use in the upper 6 GHz band

Work is set to conclude by March 2025

Findings from these projects could inform future regulatory and policy developments to further improve spectrum access in the UK.

# Next steps

---

- Supporting innovation and ways to increase an efficient use of resources like spectrum is an ongoing priority for the Government
  - Spectrum should be an enabler to innovation, not a barrier
  - We are actively promoting policies and initiatives focused on spectrum innovation
  - Our commitment to collaboration with industry, Ofcom, and other Government departments will continue as we work towards achieving the Government's missions
-
